18 Preamble

19 WHEREAS, Realization of Maryland’s compliance with the nutrient and  
20 sediment reduction goals of the Chesapeake 2000 Agreement and the forestry  
21 conservation goals of the 2007 Forestry Conservation Initiative will require immediate  
22 implementation of innovative, high–impact Chesapeake Bay restoration strategies like  
23 the Sustainable Forestry Act of 2009, which is intended to promote forest land  
24 retention within the Bay watershed; and

25 WHEREAS, The Bay watershed consists of 24 million acres or 58% of forest  
26 land and study after study has found that retaining and expanding forests is critical to  
27 the success of restoring the Bay because forests are the most beneficial land use for  
28 protecting water quality, due to their ability to capture, filter, and retain water, as  
29 well as absorb pollution from the air, as noted by the 2006 report published by The  
30 Conservation Fund entitled “The State of Chesapeake Forests”; and

31 WHEREAS, Chesapeake forests are excellent assimilators of air pollution,  
32 retaining up to 85% of the nitrogen they receive from air emission sources such as  
33 motor vehicles and electric utilities and are essential to filtering drinking water for  
34 75% of the Bay’s more than 11 million watershed residents, while simultaneously  
35 providing valuable ecological services and economic benefits ranging from carbon  
36 sequestration and flood control to wildlife habitats and forest products; and

37 WHEREAS, Chesapeake forests annually contribute an estimated \$24 billion to  
38 the Bay watershed in ecological services such as wildlife habitat, recreation, air and  
39 water filtration, and flood control, including the contribution of an estimated \$22

1 billion to the regional economy and \$2.2 billion to Maryland's economy from the forest  
2 products industry; and

3 WHEREAS, A sustainably managed forest system also helps to promote  
4 domestic renewable energy production and clean green energy produced in-State from  
5 biomass, including forestry residues, which are vital, not only to securing energy  
6 independence, smaller trade deficits, economic growth, and clean air and water, but  
7 also to facilitating compliance with the 2010 goals of the Chesapeake 2000 Agreement,  
8 the nutrient reduction goals of the Water Quality Improvement Act of 1998, and the  
9 land conservation goals of the 2007 Forestry Conservation Initiative; and

10 WHEREAS, The importance of, and urgency for, Maryland's leadership by the  
11 enactment of this Act is attributable to threatened forest land conversion equivalent to  
12 100 acres per day within the Bay watershed, that is directly linked to an expanding  
13 population, which absent remedial strategies like this Act, could result in the  
14 detrimental impacts noted in "The State of Chesapeake Forests" report and other  
15 studies that include: (1) the loss of 9.5 million acres by 2030 resulting in the amount of  
16 increased nitrogen reaching streams by 200%; (2) the increase in the cost of drinking  
17 water and the decline in air quality adversely affecting public health; (3) the largest  
18 intergenerational transfer of family-owned forest land in the region's history with  
19 increased risk of loss of forest land to development; and (4) the increase in invasive  
20 pests that dramatically alter forest habitat, diminish available food sources, and  
21 shelter and compete with native species; and

22 WHEREAS, This Act will help Maryland to meet its commitment under the  
23 2010 goals of the Chesapeake 2000 Agreement and the 2007 Forestry Conservation  
24 Initiative by improving and sustaining the health and ecological diversity of  
25 Chesapeake forests; encouraging retention of privately owned forest lands; protecting  
26 and expanding forests in urban areas; increasing public appreciation for the value of  
27 Chesapeake forests; measuring Chesapeake forest conditions in the future; and  
28 promoting new markets in the field of renewable energy emanating from the use of  
29 woody biomass; and

30 WHEREAS, By enacting this Act, Maryland will continue its leadership by  
31 demonstrating its commitment of ensuring that Chesapeake forests, including the 2.6  
32 million acres of forests within the State, are conserved and managed through a  
33 sustainable forestry policy worthy of emulation by the other signatories to the  
34 Chesapeake 2000 Agreement and the 2007 Forestry Conservation Initiative; now,  
35 therefore,

22           (a) (1) In this section, the term “forestry” includes activities prescribed by  
23 a licensed professional forester in accordance with § 7-101 of the Business  
24 Occupations and Professions Article.

25           (2) “Forestry” does not include the clearing of land as a prelude to a  
26 change in the use of land.

27           (b) Forestry, as prescribed by a person licensed as a forester under Title 7 of  
28 the Business Occupations and Professions Article and in accordance with accepted  
29 silvicultural principles, as defined by the Society of American Foresters, constitutes a  
30 traditional, fundamental, beneficial, and desirable use of the State’s forest resource.  
31 Forestry is an important land management tool that contributes significantly to the  
32 economy of the State by the support of a vital forest products industry, as well as to  
33 the health of forests and their wildlife, water quality, and recreational benefits by the  
34 sustainment of forest productivity and wildlife habitats.

1 (c) In Maryland, forestry, including the harvest and transport of forest  
2 products, is often carried out in close proximity to populated areas. Other than  
3 development for more intensive uses, this harvest of timber may represent a major  
4 source of income for the profitable use of private property.

20 consideration, development, and interpretation of planning and zoning requirements  
21 that beneficially impact the efficient and economic practice of forestry in a manner  
22 consistent with the local government's implementation of the visions listed in Article  
23 66B, § 1.01 of the Code.
